linPRO®-R dairy

OPTIMIZE DAIRY PERFORMANCE & HEALTH …

Ask us how.

The Product:

LinPRO-R is a supplemental fat and protein source for dairy cows made by dry-extruding several ingredients including flaxseed, alfalfa, peas and Vitamin E. LinPRO-R is an easy-to-use, stable source of land-based Omega-3s that can be added to a dairy cow's diet to provide a rumen-protected source of these essential fatty acids. Ultimately, linPRO-R optimizes overall dairy performance and health.

Key Benefits of LinPRO®-R

- **Increased** milk yield
  - Maintain milk component yields
- Positive immunity response
  - Reduced somatic cell count
  - Reduction in mastitis
  - Less involuntary culls
- Improve reproductive performance
- Excellent source of RUP and rumen-protected lysine and methionine
- Dry-extrusion mitigates the biohydrogenation within the rumen of the Omega-3 polyunsaturated fats
- Omega-3 enriched milk products

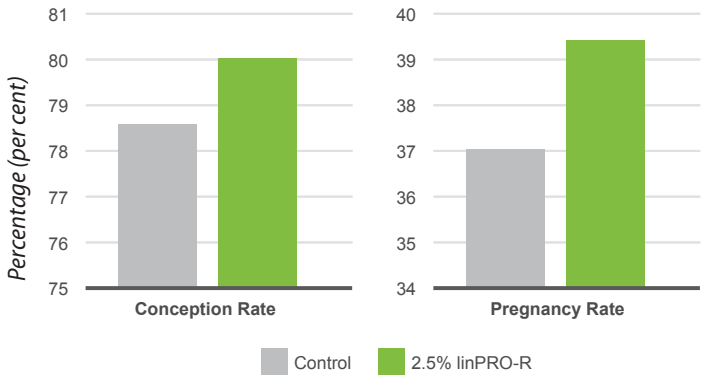
University and Large On-Farm Results

It is concluded that feeding linPRO-R improves production, health and reproductive performance within a dairy herd. Improved production efficiencies result in positive economic returns for producers along with an enhanced quality of life for the cow and a reduced incidence of involuntary culls in the herd.

Reproduction Results [1]



[1]2017 on-farm trial conducted on large California dairy operation

Health Results [2]
